

Lift & Tilt Carts with Sequence Select

Models **CART-500-LT**, **CART-1000-LT**, and **CART-1000-LT-PSS** have a unique design which allows the user to RAISE and TILT materials to an ergonomic position for better posture and operator comfort. The manual hydraulic foot pump controls the platform lift, lower, and tilt. A manual selector valve is used to control the lift/lower sequence independently from the tilt sequence. The platform includes a 6½" high retaining lip on model **CART-500-LT** and 7" high on **CART-1000-LT** series. Rolls on two (2) rigid and two (2) swivel 5" poly casters.

Models **CART-400-LT** and **CART-600-LT** are elevated by means of a foot actuated hydraulic cylinder. As the table is raised, it simultaneously tilts to an angle of 45° at full elevation. Built-in retaining lip keeps containers in place. Units roll on 5" polyurethane casters, two (2) rigid and two (2) swivel with brakes.
